

Gaultheria procumbens

Wintergreen

Also called checkerberry, or teaberry. A low-growing, creeping groundcover. Evergreen; dark, glossy leaves often turn red or reddish-purple in winter. Red berries ripen in late summer and persist through the winter. Both leaves and berries taste and smell strongly of wintergreen. Wintergreen is difficult to transplant, but once it's established, it's trouble-free. It needs acid soil, although it does well in both rich, moist woods and dry, sandy ones.

Suggested companions: under oaks (*Quercus* sp.), white pine (*Pinus strobus*), with partridgeberry (*Mitchella repens*)

Plant Type: Wildflower

Size: 2"-6" H
 W

Water Tolerant: No

Habitat:

Forested Upland
Woodland Margin

Soil: Average Garden Soil
Sandy/ Gravelly
Rich Moist

Exposure: filtered
 shade

Flower Color:
White

Bloom Time:
April
May

Plant in:

Groundcover: Yes

Other Attributes:
Deer resistant
Fall color
Winter interest
